Cleartext Submission of Password

Description

A password was submitted to the application using an unencrypted HTTP connection. This makes the password vulnerable to eavesdropping by attackers on the network, potentially leading to account compromise or further attacks.

Vulnerability found in /mutillidae/

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

Password field confirm_password sent in clear text from URL <http://192.168>

Solutions

Ensure that all password submissions and sensitive data transmissions are performed exclusively over HTTPS (HTTP Secure). Implement HSTS (HTTP Strict Transport Security) to enforce the use of HTTPS and prevent downgrades to HTTP.

Content Security Policy Configuration

Description

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.

Vulnerability found in /

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

CSP is not set for URL: `http://192.168.10.21/`

Solutions

Configuring Content Security Policy involves adding the Content-Security-Policy HTTP header to a web page and giving it values to control what resources the user agent is allowed to load for that page.

Clickjacking Protection

Description

Clickjacking is a technique that tricks a user into clicking something different from what the user perceives, potentially revealing confidential information or taking control of their computer.

Vulnerability found in /

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

X-Frame-Options is not set

Solutions

Implement X-Frame-Options or Content Security Policy (CSP) frame-ancestors directive.

- [KeyCDN: Preventing Clickjacking](#)

MIME Type Confusion

Description

MIME type confusion can occur when a browser interprets files as a different type than intended, which could lead to security vulnerabilities like cross-site scripting (XSS).

Vulnerability found in /

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

X-Content-Type-Options is not set

Solutions

Implement X-Content-Type-Options to prevent MIME type sniffing.

HttpOnly Flag cookie

Description

HttpOnly is an additional flag included in a Set-Cookie HTTP response header. Using the HttpOnly flag when generating a cookie helps mitigate the risk of client side script accessing the protected cookie (if the browser supports it).

Vulnerability found in /dvwa/

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

HttpOnly flag is not set on the cookie 'PHPSESSID' set at 'http://192.168.1.104'.

Vulnerability found in /dvwa/

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

HttpOnly flag is not set on the cookie 'security' set at 'http://192.168.1.104'.

Vulnerability found in /phpMyAdmin/index.php

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

HttpOnly flag is not set on the cookie 'pma_theme' set at 'http://192.168.1.104'.

Vulnerability found in /mutillidae/index.php

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

HttpOnly flag is not set on the cookie 'showhints' set at 'http://192.168.1.104'.

Vulnerability found in /phpMyAdmin/index.php

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

HttpOnly flag is not set on the cookie 'pma_fontsize' set at 'http://192.1

Vulnerability found in /phpMyAdmin/index.php

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

HttpOnly flag is not set on the cookie 'pmaPass-1' set at 'http://192.168.

Solutions

While creation of the cookie, make sure to set the HttpOnly Flag to True.

Vulnerability found in /mutillidae/index.php

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

Response contains potential system path: /var/www/mutillidae/process-login

Solutions

Ensure that error messages and application responses do not disclose full filesystem paths or other sensitive system information. Use generic error messages for end users and log detailed errors only on the server side.

Secure Flag cookie

Description

The secure flag is an option that can be set by the application server when sending a new cookie to the user within an HTTP Response. The purpose of the secure flag is to prevent cookies from being observed by unauthorized parties due to the transmission of a the cookie in clear text.

Secure flag is not set on the cookie: 'pmaUser-1' set at 'http://192.168.1.101:8080'

Vulnerability found in /phpMyAdmin/index.php

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

Secure flag is not set on the cookie: 'pmaPass-1' set at 'http://192.168.1.101:8080'

Vulnerability found in /mutillidae/index.php

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

Secure flag is not set on the cookie: 'showhints' set at 'http://192.168.1.101:8080'

Solutions

When generating the cookie, make sure to set the Secure Flag to True.

Unrestricted File Upload

Description

File upload vulnerabilities are when a web server allows users to upload files to its filesystem without sufficiently validating things like their name, type, contents, or size. Failing to properly enforce restrictions on these could allow an attacker to upload potentially dangerous files. This could even include server-side script files that enable remote code execution.

Vulnerability found in /twiki/bin/upload/Main/WebHome

[Description](#) [HTTP Request](#) [cURL command line](#) [WSTG Code](#)

Unrestricted file upload vulnerability in the parameter filepath

Solutions

Check the file extension against a whitelist of permitted extensions rather than a blacklist of prohibited ones. Make sure the filename doesn't contain any substrings that may be interpreted as a directory or a traversal sequence (../). Rename uploaded files to avoid collisions that may cause existing files to be overwritten. Do not upload files to the server's permanent filesystem until they have been fully validated.
